

## FEATURES

- Good sealing, leakage proof and reliable measurement in high temperature, high pressure, high viscosity and strong corrosion applications.
- No blind area. Striking in display, clear in reading and wide in range; with alarm and control switch, the liquid level or interface can be controlled at upper or lower limit
- LB transmitter converts the signal of liquid or interface level into 4~20mA DC standard signal, and achieves the purpose of remote measurement, indication, record and control

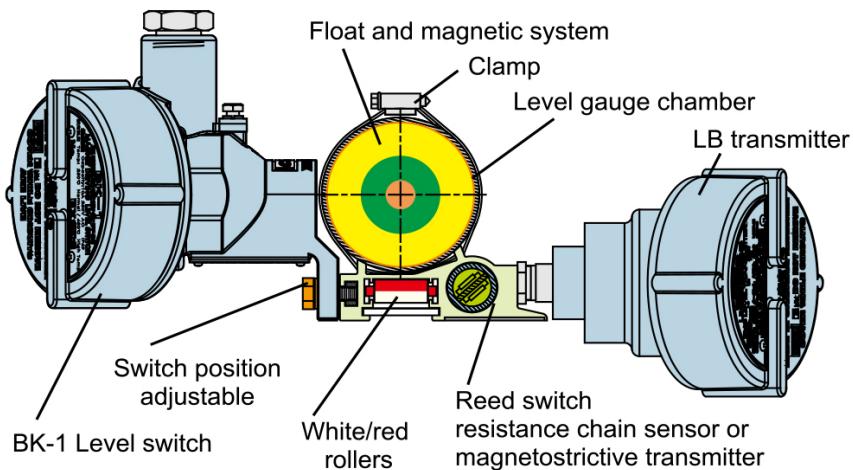

## APPLICATIONS

- The products are widely used in electric power, petroleum, chemical, metallurgy, environmental protection, marine ship, architecture and foodstuff industries

- Magnetic column / fap
- Remote transmitter
- Tri-magnet switch
- Can bind with magnetostriuctive transmitter

## TECHNICAL SPECIFICATION

Accuracy	: $\pm 10\text{mm}$
Measure range	: 300~15000mm
Medium density	: $\geq 350\text{kg/m}^3$
Density difference	: $\geq 150\text{kg/m}^3$
Ambient vibration	: $\leq 25\text{Hz}$
Medium viscosity	: $\leq 0.4\text{PaS}$ , For the high viscosity and easy crystallization at low temperature, heating jacket level gauge can be used.
Material	: 304, 316, 316L, 316Ti, 321, 1.4301, 1.4435, 1.4401, 1.4571, 1.4783, 0Cr18Ni9, 1Cr18Ni9Ti, 00Cr17Ni14Mo2, 0Cr17Ni1Mo2, 0Cr18Ni2MoTi, PP, PVC, PTFE, Ti, Zr, Ta, Hastelloy C-276, Monel
Process range	: Factory standard: HG059~0635-97 Dn5 PN1.0~PN32 Or according to ANSI B16.5; 1/2"~10" DN10-DN50 GB/T 911-000; JB/T 79.1-94 SH3406-1996 DIN 2635; DIN10-DN250; DIN 2527; DN10-DN25010A~50A JIS 20K FF RF; 1/2"~10" JPI
Pressure rating	: PN1.0, PN1.6, PN2.5, PN4.0, PN6.4, PN11.0, PN16.0, PN25, PN32.0; Class 150LB, 300LB, 600LB, 900LB, 1500LB, 2500LB, ANSI
Working temperature	: -196...+520°C, 77.15~793.15K
Enclosure	: IP66
Safety mark	: Exia IICT1~T6; Exd IIBT1~T6
Follow Speed	: $\leq 0.08\text{m/s}$
Amplitude	: $\leq 0.5\text{mm}$

## STRUCTURE PRINCIPLE

The magnetic liquid level gauge operates on principle of Buoyancy and Magnetic Coupling. As the liquid level rise or fall in the vessel, the float in chamber will rise or fall correspondingly (See fig.1). The permanent magnet in the float actuates the white and red rollers to reverse 180° due to magnetic coupling. As liquid level increases, rollers reverse from white to red; while liquid level decreases, rollers reverse from red to white. The red/white interface of indicator shows the actual level of medium in vessel. The rollers material of common level gauge for atmospheric temperature is plastic resin; and for high temperature applications(up to 520°C), alumina ceramic rollers with permanent magnet steel armored should be used. MLG 517T series are top mounted magnetic level gauge the chamber is on the top of vessel and connected with float and connecting rod, the magnet field of permanent magnet makes the level in vessel to the top chamber and conveys to level indicator, transmitter and switch due to magnetic coupling effect.

principle scheme of magnetic roller level g

## OPTIONAL LB LEVEL TRANSMITTER

LB transmitter imposes the level signal from magnetic system coupling on every dry reed of resistance chain in sensor. It will change output resistance continuous. The measure voltage will change accordingly proportional to the level in vessel. With transmission transducer, output a two wire 4~20mA analog signal; HART communication protocol is optional.

## Upper terminal box type

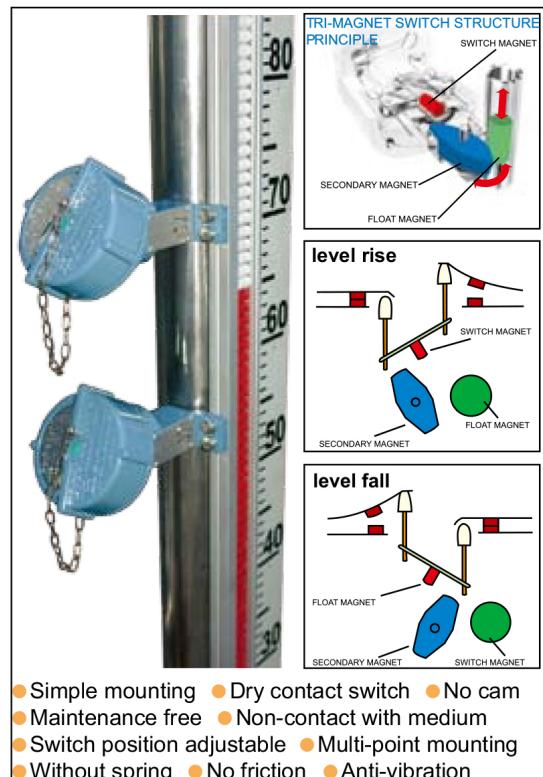

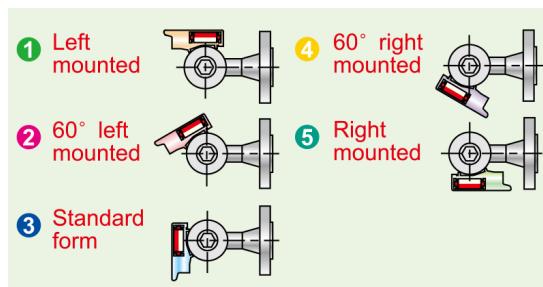

lower terminal box type

## TRI-MAGNET (QUADRA-MAGNET) DRIVEN LEVEL SWITCH

BK-1/EX Tri-Magnet Level Switch, as the most reliable and practical level switch in the world, has bistable memory function. Mounted on the indicator, in the same magnetic coupling system with level gauge, not contact with the process medium, this level switch is high-temperature resistant, explosion proof and shockproof. It utilizes three magnetic coupling burst switches. When the magnetic float (the first magnet steel) in the chamber close to the switch, the second magnetic component will rotate, meanwhile the third magnet steel in the switch will rotate reversely and the push bar will actuate the switch. BK-1H/Ex Quadra-magnet driven level switch is suitable for high temperature applications. The fourth magnetic coupling is used to keep the terminal box far from the high temperature heat source, and working temperature of BK-1H/Ex Quadra-magnet level switch can be up to 420°C.

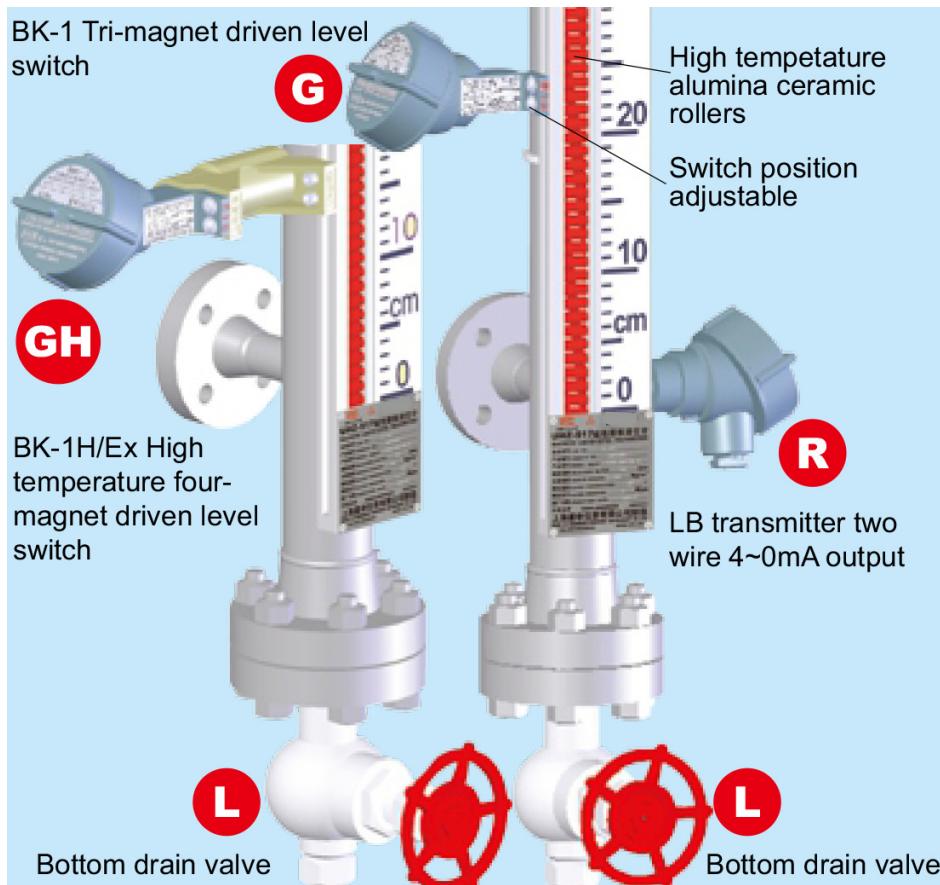

## TECHNICAL SPECIFICATION

	: 10A 220VAC; 0.6A 150V DC; SPDP, -50~180°, -50~420°
Safety class	: ExiaIICT1~T6, ExdIIBT1~T6
Electrical entry	: M20×1.5NPT(F)

### ALL TYPES OF MAGNETIC LEVEL GAUGES

## ORDERING CODES

MLG 517

**Example1:** MLG 517C10 magnetic level gauge, side-side mounted, bottom with drain valve, two BK-1/Ex three-magnet driven switches, explosion proof LB transmitter, measuring range 2000mm, medium 98% oil of vitriol, medium density 1840kg/m<sup>3</sup> pressure 1.2MPa, maximum operating temperature 120°C ,nominal pressure 2.5MPa.

**MODEL NUMBER:** MLG 517C10LG2RD-2000-1840-2.5

**Example2:** MLG 517C1DL high temperature and pressure magnetic level gauge, side-side mounted, bottom with drain valve, measuring range (flange center-center distance) 800mm, medium steam, medium density 780kg/m<sup>3</sup>, operating pressure 12MPa, operating temperature 420°C , nominal pressure 16MPa.

**MODEL NUMBER:** MGL 517C12DL-800-780-16

**Example3:** MGL 517T32 top-mounted magnetic level gauge with inner protection tube, process connection flange DN80 PN1.0, distance from flange to vessel bottom is 3500mm, measuring range 3200mm, medium diesel oil, medium density 810 kg/m<sup>3</sup>, operating pressure normal, operating temperature 40°C, nominal pressure 150LB.

**MODEL NUMBER:** MGL 517T32-3500-3200-810-150LB
